Goal: Provide a hands on, real world planning experience.

Objectives: Experience working with municipal client; research; presentation; group working experience.

This studio will create a “Healthy Community” plan for South Amboy, a Middlesex County community. The studio will address the following:

- Analysis of existing conditions focused on health related data and needs assessment.
- Preparation of a plan which will address such topics as nutrition and physical activity, including food policy and food systems, active transportation, “complete streets”, safe routes to schools & parks, healthy community design, comprehensive plans and health equities.
- A public outreach component will be part of the studio.

Attendance and Class Time
Class time will generally be as scheduled; however, additional sessions may be necessary from time to time. This will include field visits, client contact and group work sessions.

All students are expected to make presentations and interact with the client. It is understood that all students may not be available for all additional sessions. Attendance at scheduled classes is expected.

Final Product
The final work product is expected to be of professional quality including mapping, graphics, photo simulations, renderings, etc.

Grading
Grading will be based upon the quality of the final work product, attendance and participation. Consideration will be given to the student’s evaluation of their own performance and that of their classmates. It is expected that students will complete their assignments within the given time frame.

Academic Integrity
Each student is required to read the statement regarding academic integrity. Please see link below:
